DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, Applicants are required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, Claims 10 to 15, drawn to a method of spatialization of sound relating to video, comprising transforming audio coordinates from the 2D coordinate system of a video screen plane to a 3D coordinate system, wherein height information is mapped to audio depth information perpendicular to the 2D video plane.

Group II, Claims 16 to 17, drawn to a method for decoding a presentation description of audio signals, comprising receiving audio signals corresponding to a sound source linked with a parametric description of the sound source, determining whether or not to perform audio presentation in 3D, spatializing in a 2D visual context said sound source in a 3D domain, and otherwise spatializing in a 2D domain.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Group I has special technical features of spatializing sound relating to video, where audio coordinates are transformed from a 2D coordinate system of a video screen plane to a 3D coordinate system. Group II has special technical features of determining whether or not to perform audio presentation in 3D, linking a sound source with a parametric description, and spatializing in a 2D visual context. Thus, Group I requires accompanying video and a video screen plane, while Group II does not. Group II requires a parametric description of audio signals, and includes a step of determining whether or not to perform audio presentation in 3D, with an alternative of spatializing in a 2D domain, but Group I does not. Moreover, a video screen plane is not necessarily the same as a video context.

3. Applicants are advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

4. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
